vietjetAir.com	**PRE-FLIGHT PREPARATION AND CREW BRIEFING CHECKLIST**	VJC-OMC-F-017 Iss01/Rev00 15 Nov 2022

A/C REG	FLIGHT No	SECTOR	DATE	ETD (UTC)	ETA (UTC)

I.	FLIGHT PLANNING PREPARATION	REMARK		
		YES	NO	N/A
1.	**Check Notam (DEP/DEST/En-route/ DEST ALT APT)**			
2.	**Check Weather (TAF, METAR…of DEP/DEST/En-route/ DEST ALT APT)**			
3.	**Obtain Zero Fuel Weight (or Payload)**			
4.	**Check Aircraft Performance**			
5.	**Check Take-Off Performance & Landing Limitations**			
6.	**Check Take-Off / Landing / Overfly Permit & Slot Approval**			
7.	**Obtain Crew Names & Check validity of Operating Crew with Crewing Officer or on the AIMS system when in doubt**			
8.	**Produce Operation Flight Plan (OFP)**			
8.1	Domestic			
a.	Generate OFP			
b.	Submit ATC by AFTN system			
c.	Send OFP to Airport team / Station Manager as applicable			
8.2	International			
a.	Generate OFP			
b.	Send ATC & Zero Fuel Weight the Station Manager			
c.	Send OFP to the Station Manager			
II.	**CREW BRIEFING**	**REMARK**		
		YES	**NO**	**N/A**
1.1	**General Info**			
1.1	Flight Number			
1.2	A/C Registration			
1.3	Departure and Arrival airports			
1.4	STD/STA or ETD/ETA			
1.5	Pax and cargo info (EST PLD, EZFW, NOTOC)			
1.6	Pax gate or A/C parking gate			
2.1	**Flight Plan Info**			
2.1	Take-off /En-route / Destination ALT			
2.2	Pertinent NOTAMs			
2.3	Expected Weather (departure, arrival, ALT)			
2.4	Enroute Weather			
2.5	MEL/CDL			
2.6	Trip, Block Fuel			
3.	**Final Fuel Order (with reason as required)**			
	To document the Dispatch briefing, the Yes/No portion of the first page of the CFP should be ticked by the PIC.			
4.	**Remote dispatch**			
	Although a thorough crew self-briefing is the most practical procedure, flight dispatcher must initiate to contact crew for any and all unusual and last-minute change in flight information not included in the flight package. This is to ensure positive Operational Control. Crew must also contact Flight Dispatch for any information that requires clarification.			

FLIGHT DISPATCHER
(Full Name Electronic Signature)

Introduction

Briefings are an essential part of flight preparation and represent a critical moment for team building, leadership establishment and an opportunity to gather and select all operational data pertinent to the upcoming flight.

Objective

Pre-flight briefings should start at the dispatch office when the dispatcher gives the flight plan to the flight crew for review and the crew's final decision on the route, cruise flight level and fuel quantity.

An effective briefing should be conducted regardless of how familiar the flight dispatcher and crew members are with the flight plan. This is one of the most critical moments for developing flight dispatcher-crew synergy. Because vital and often irreversible decisions are made (e.g., dispatch fuel quantity, loading, de-icing, routing). By the end of the flight dispatch briefing as part of the flight preparation phase, the crew should have a mental model of the flight plan and possible problems that might arise in normal operations.

Importance

Many aviation incidents and accidents can be linked in some way to flaws in flight preparation. Most of the incidents and accidents related to poor flight preparation are due to:

1. Lack of understanding of prevailing conditions

2. Loss of horizontal or vertical situational awareness

3. Poor flight dispatch-crew coordination

Techniques for conducting effective briefings

The briefing should be quick, done in sequence, concise and clear.

NOTAM

Notices to airmen provide flight dispatch and crew with critical information that may have a direct effect on flight safety (e.g., unserviceable navaids, change of routing, airspace restrictions, work in progress on taxiways and/or runways, obstructions, man-made obstacles, volcanic activity). NOTAM coverage can be national, regional, specific to one route or specific to a given airport. NOTAMs generally do not include detailed explanations and graphics. If there is any doubt about the contents or interpretation of a NOTAM, pilots should clarify.

Weather Briefing

It is important to discuss the effects of prevailing and forecast weather conditions for departure and arrival, take-off alternate if needed. Not only is this important for safety reasons but also because being fully aware of the weather conditions will allow the crew to respond effectively to any questioning from passengers or cabin crew if the flight is delayed or cancelled.

Aircraft condition affecting flight operations

Any entry in the MEL or CDL and Highlight any performance limitations or penalty.

Fuel

Discuss the planned fuel on board. This is often the final point of the pre-flight briefing. Many factors such as weather, estimated load, NOTAMs, company policies have to be taken into account and discussed as part of this final step of the briefing.

Pre-Flight Preparation and Crew Briefing Checklist for Flight Dispatcher

Besides to follow and execute the FDM chapter 3 - Dispatcher Procedure, all Duty Flight Dispatcher is responsible to implement and fulfil the Pre-Flight Preparation and Crew Briefing Checklist during the Flight Planning preparation and crew briefing. This checklist will be completed and saved on the file electronically for 90 days in OMC computer hard-drive and stored in Company OneDrive for back-up. After the 90-day periods the data is deleted.
